

HIGHWAY SAFETY CORP

Fabricated Steel Products for the Highway and Solar Industry

Highway Safety Corp History

Highway Safety Corp has been serving the highway construction industry for over 35 years. We are a major manufacturer and supplier of highway guardrail products, end terminals, bridge rail and all related detail components.

Highway Safety Corp is American Institute of Steel Construction (AISC) quality certified which allows us to manufacture many types of engineered products such as bridge rail, overhead sign structures, pedestrian bridges, driven post supports for the solar industry, cell tower components and picket rail fence.

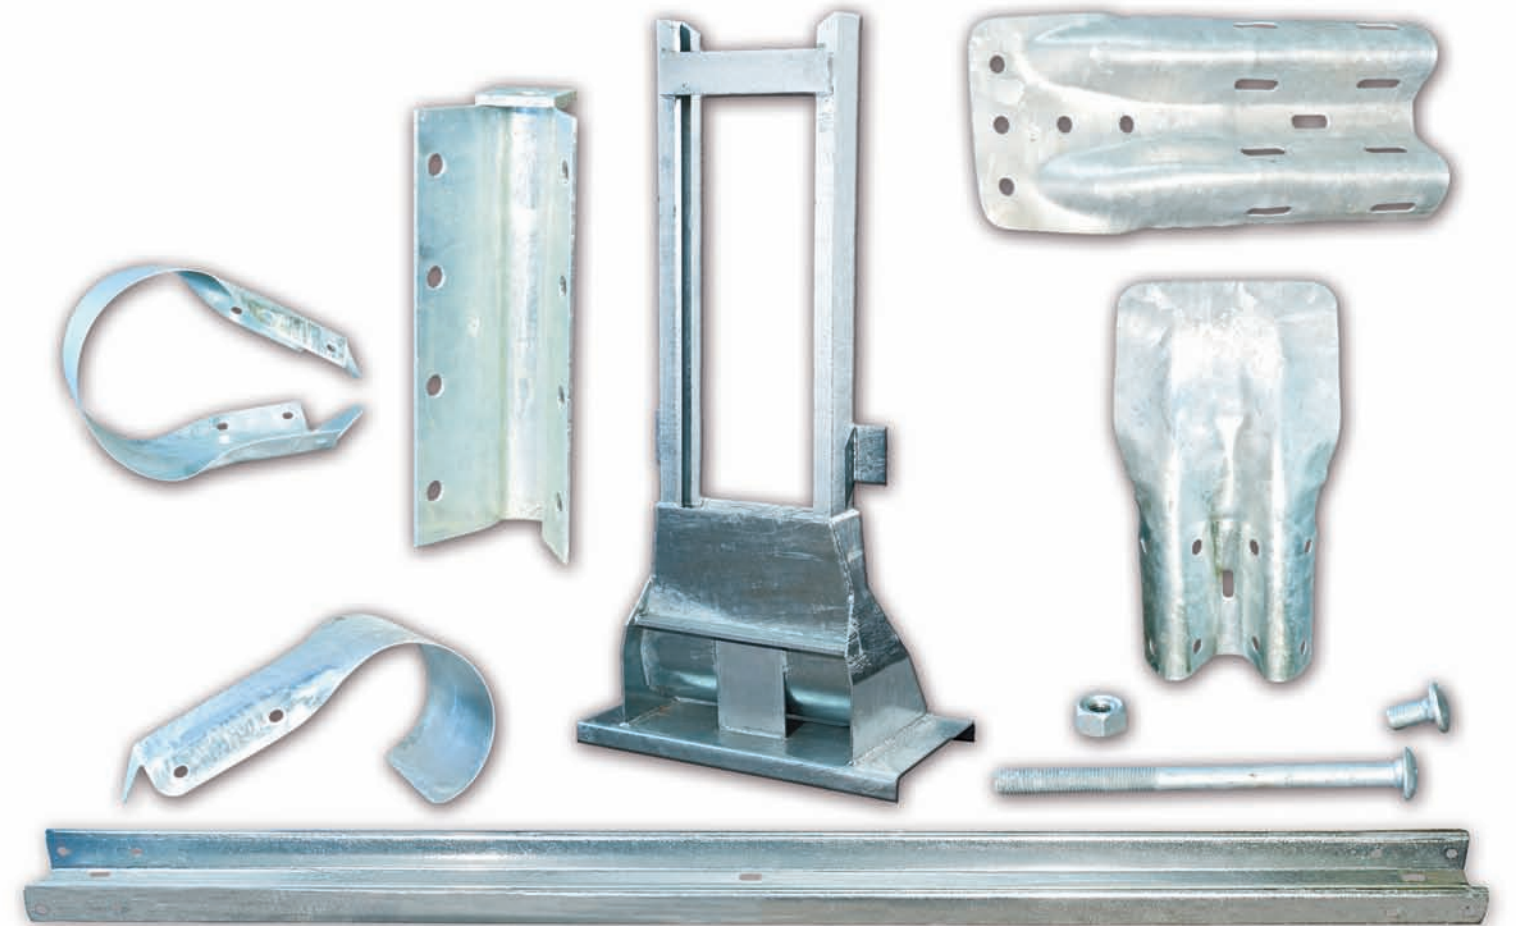

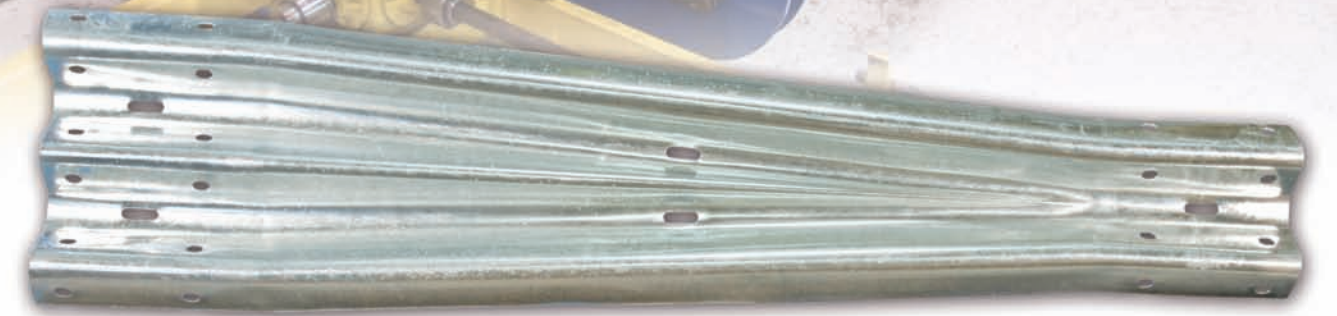

Both our fabricating plants in Glastonbury, CT and Marion, OH have hot dipped galvanizing plants on site for fast and efficient service.

Highway Guardrail Systems Components

Highway Safety Corp manufactures 10 gauge and 12 gauge corrugated steel w-beam panels in 12'6" and 25' lengths including convex and concave radius panels. Along with panels, we manufacture and provide W6x8.5# steel beam posts, S3x5.7# cable and box beam post as well as special order sizes.

In addition to the standard corrugated barrier, we manufacture various specialty barrier systems such as box beam guardrail (which is used mostly in upstate New York for median and roadside applications), low tension cable systems and steel backed timber guardrail. With these barrier systems we can also provide the necessary hardware and terminals.

Bridge Rail

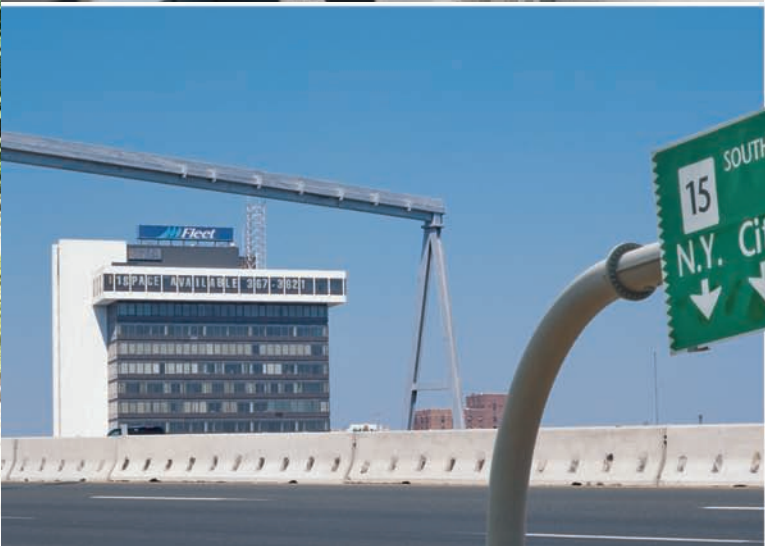

Engineered Products

The quality and service our company provides has translated very effectively into the specialty fabrication market making Highway Safety Corp one of the leading bridge rail and specialty manufacturers. Our sales, engineering, and fabrication departments have worked successfully on numerous projects requiring on-time drawings and tight deadlines.

Highway Safety Corp is pleased to provide a competitive and timely quotation to meet your specialty steel fabrication requirements.

Overhead Sign Structures

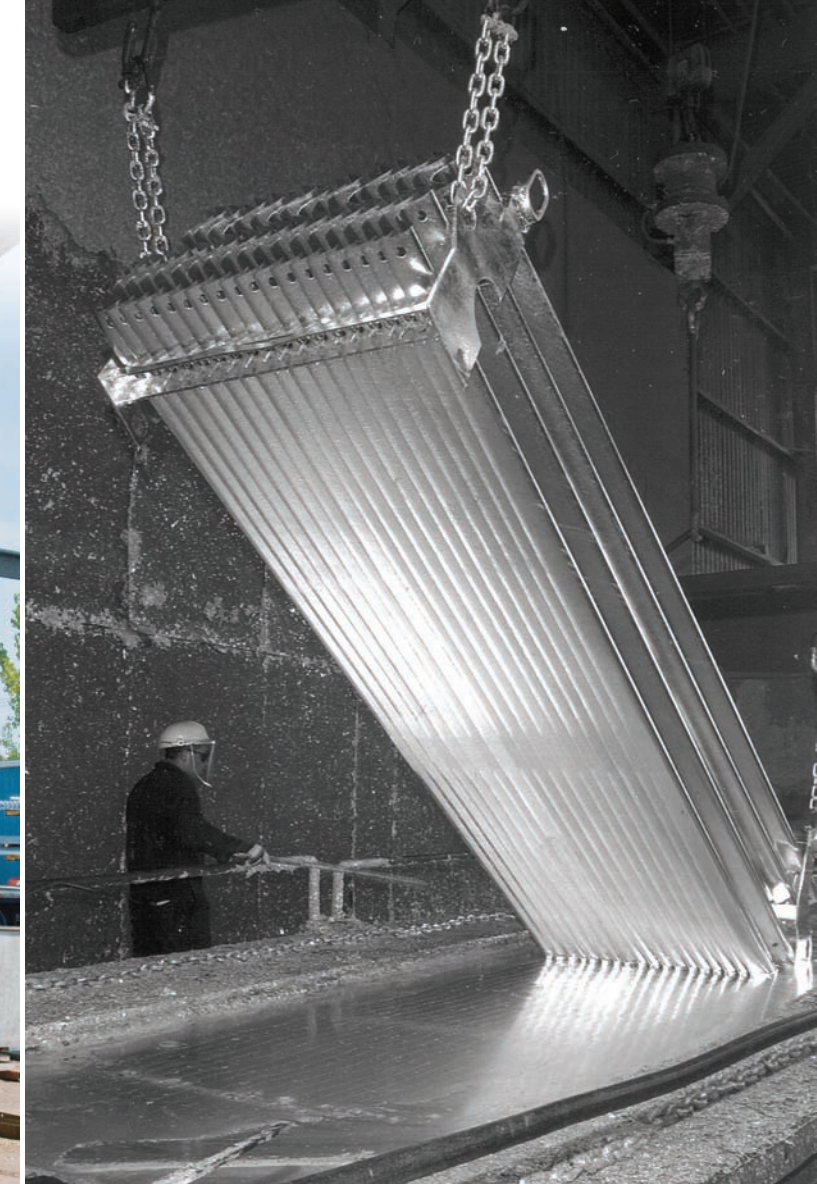

Driven Post (Pile) Supports

Highway Safety Corp is a major supplier of “driven posts” (Piles) for a number of industries which include:

- Solar Fields
- Sound Barrier
- Rock-Fall Fence
